For the file `moo.jlex`, it was first necessary to add the proper macros such as the newline character, a letter, underscore, double quote, and slashes and hashtags to account for comments. Lastly, the program needed to define an escape character that is an escape character followed by an n, t, single quote, double quote, question mark, or another backlash. In `P2.java`, the main program, I developed and designed the test cases to be modeled as the example on is provided.
